

Perfect play on a wet
and rainy day!

The children explored
our new water pump.

What fun!

Really concentrate so that you can collect all the water.

Oops! Watch out, it's trickling out of your teapot spout!

Have you ever put your hand or a bath toy over the plug hole in the bath and stopped the water from running out?

Challenge : How could we stop the water going down the drain and make a puddle?

The base of the cylinder was way too small and we could see the water still trickling down the drain.

“How’s about trying a washing up bowl?” said Riley.

“You can still see a little bit of the edge,” said Lillie.

“That bowl’s
not big
enough.
We need
the really
massive
one!”

Even though this bowl covered the whole of the drain we could see little patterns of water through the plastic flowing under the bowl.

How could it be getting there?

“There must be a hole!”

“It’s tiny!”

Even with the biggest, heaviest container
the water could trickle underneath and
reach the drain!
We decided water can creep through the
tinniest hole!
