

Let's buy some ingredients for sandwiches.

Once your child has mastered adding amounts of money together, have a go at taking an amount of money away from 10p. Follow the simple problems.

Again, you could either use real 1p coins, print and cut out the coins below or make your own. You could even take on the role of the shop assistant so that your child can pay for their ingredients and see how much they have got left.

You could make up all sorts of other problems too. Why not have a go at writing out the number sentences too! eg. $10p - 2p = 8p$

Enjoy!

You have 10p to take to the shops. You buy some ham which costs 5p. How much money do you have left? Use the coins to help.

You have 10p to take to the shops. You buy some lettuce which costs 3p. How much money do you have left? Use the coins to help.

You have 10p to take to the shops. You buy some bread which costs 6p. How much money do you have left? Use the coins to help.

You have 10p to take to the shops. You buy some butter which costs 4p. How much money do you have left? Use the coins to help.
