

Week beginning 17th May 2021.

Fun in Foundation

This week we have been learning all about the creatures that might live in our outdoor area at school. We now know that the plants will attract more insects, and the insects will attract more birds. We all worked really hard to write about the creatures and where they live. We know that it's called a habitat too and wrote some super sentences about them. We also found out how to make bird feeders out of fat and bird seed. We heated up the fat, it melted and turned to a liquid. But when it cooled down it became hard again! We were real Scientists!

In Maths we have continued to work on teen numbers but have also pretended to

go shopping and find out what we could buy for our money. It was great fun.

Note : Next week, PE Day is on Thursday.
