

Three Little Pigs investigation

Today we are going to be scientists...

But what is a scientist?

“Where they put chemicals, they
put them together and stuff
comes out the glass.”

-Rory-

“They do experiments”

-Ella W-

What happened to the pigs houses?

“The wolf blew the roof”
-Alice-

“He couldn’t blow the house of bricks over”
-Ella W-

Could the pigs have used different materials to build **stronger** houses?

What does investigate mean?

“Find stuff”
-Brandon-

We are going to investigate which materials are strong.

Who can remember which materials we learnt about yesterday?

“Fabric”
-Isabelle-

“The house was made of concrete”
-Asa-

“Wood”
-Aaliyah-

“Bricks”
-Rosaleah-

“Glass”
(is glass strong?)
“No because if you hit it with a hammer, it will break. It can be strong”
-Ella-

“The house was made of paper”
-Rellie-

“It was made of glass. The house was made of glass”
-Cody-

We collected lots of materials.
We used the hair dryer to see if the materials we strong enough to withstand the wolf huffing and puffing them.

First we tested the fabric.

Rory made a prediction...

"If you blow the material (fabric) it will just blow away"
-Rory-

It was NOT strong.

The paper was not strong. It blew over with a tiny huff and puff.

But the wood, the brick, the concrete and the plastic were all strong.

Which materials should the pigs have used to make their house strong and safe?

“wood”
-Cody-

“concrete”
-Peach-
