

The three little pigs want to build their own park

We are going to be **scientists** and investigate which **material** would make the best slide.

We are also going to learn some new words.

"Scientist do experiments"  
Ella

# What materials are these slides made from?

"That is made  
of wood"  
Peach

"The brown one is  
made of wood"  
Brandon

"If you put water  
on the wood, it  
will be slippery"  
Theo

"It's plastic,  
all of it"  
Charlotte

"It might be  
glass or  
plastic"  
Lacie

"That might  
be sharp"  
Theo

"Plastic and there  
is metal for the  
stairs, then you go  
down the slide  
and it's plastic"  
Rellie

What do you think makes a good slide?

"It's fabric"  
Aaliyah

What does smooth mean?  
"Flat, really flat"  
Jamie

"Safe"  
Aaliyah

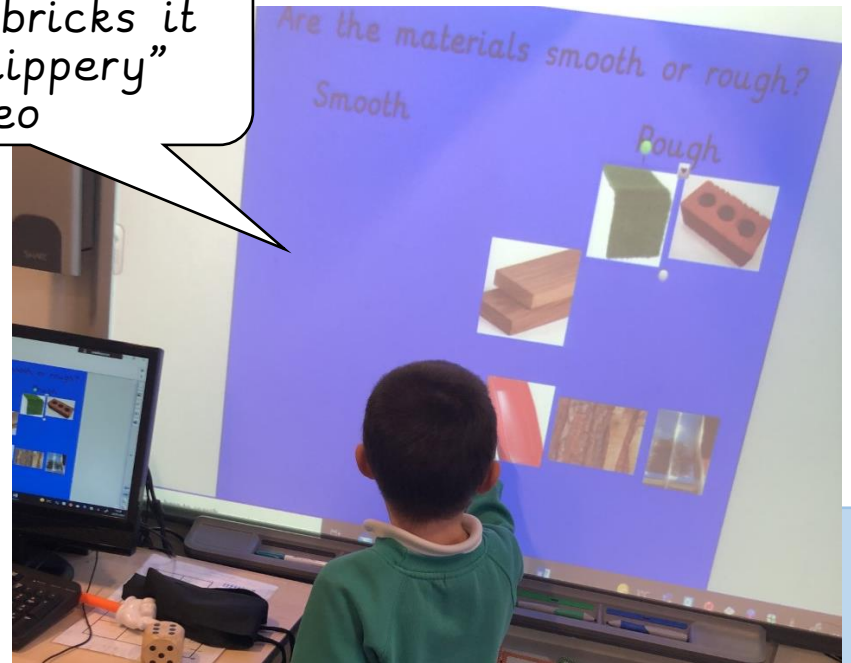

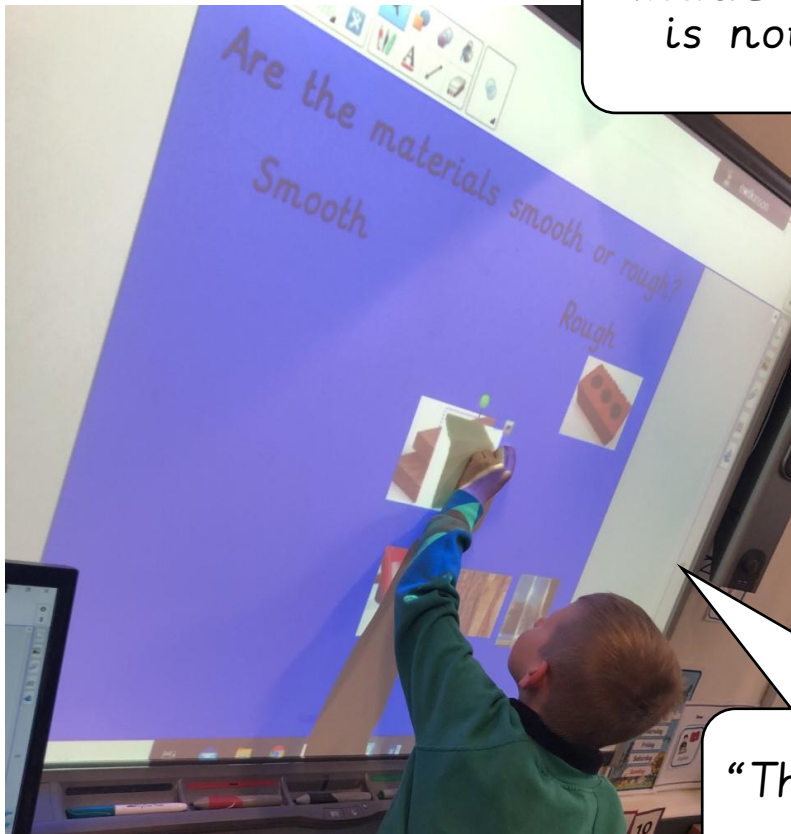

"Metal"  
Freddie

We decided that the slide must  
be smooth and slippery.

We all sorted the materials and decided which were **smooth** and which were **rough**.

"Because it is  
made of bricks it  
is not slippery"  
Theo

"The bark is rough"  
Ella

# Let's test the materials

"If you did it straight upwards, it would go super fast"  
Rory

"It goes faster"  
Noah

When it's flat it  
"Sits still"  
Rory

It goes  
"slower"  
Leo

"He stops"  
Asa

"It's bumpy"  
Teddy

We decided that the wood and the plastic made good slides because they were **slippery**.

We took the pigs into the classroom and looked for more rough and smooth things.

It's a new slide for the pigs.
