

Science Council making insects as part of 30 days of science fun in June.

Well done to this year's Science Council for being a brilliant group of enthusiastic junior scientists – they have been a pleasure to meet with on a Thursday lunchtime and have contributed to the science voice in our school, particularly during MST week and also in the wider, local community with their efforts. Well done everyone!

We have been following the progress of our pet tomato plants and can happily announce that many flowers are now dropping and beginning to bear some small green tomatoes. Some pet plants definitely had more success than others but the process has been interesting, educational and enjoyable too! Each class received a certificate from the Science Council for taking part in the challenge. Well done everyone.
