

Meet our new Science Council for 2023-2024

Year 3, 4, 5 and 6 have now assembled as a super, sensational Science Council.

After receiving our special badges to, officially, welcome us to our very important roles, we did a fun science experiment. It involved a zip lock bag of water and some sharp pencils. We pierced the bags with pencils, amazingly, without any spills or leaks just like magicians doing a magic trick.

How did it work? Well, plastic is made of polymers. The polymers have many molecules inside of them. When the pencil goes through the bag, the molecules in the polymer chains surround the pencil, sealing it up tightly and preventing leaks.
