

# Problem...

What if there were actually 9 Little Pigs instead of 3? (9 is our number of the week)

Can you think of any more materials that the pigs could build their houses of?

The children came up with some brilliant ideas for different materials. They also used their Maths-brains to work out how many more materials they needed to think of ( $3 + 6 = 9$ , so 6 more materials and so on), use the ordinal number to name the pigs and use full sentences to share their ideas.

Isaac & Harrison thought of glass.

Finley thought of metal.

Maisie said, "The sixth Little Pig could build his house of wood."

Grayson thought of steel and we talked about how steel was a type of metal.

Ava thought of plastic and Finley came up with concrete.

Finally, Aiden thought of 'material' so we talked about how it is really called fabric. It was decided that it would be a very cosy and comfy house!
