## **Support for Home Learning 2020-21**

### **“Blended Learning”**

If you end up having to self-isolate because you or someone you live with has symptoms of the virus, then it is important to focus on your health and wellbeing first of all.

If you are then able to do some college work, to help you keep up with the rest of your class, then that would be really valuable.

On the Google Classroom page for your class, you will find the “Curriculum Plan” for the year. Hopefully this is familiar to you as you have a copy in your folder. In each week’s planned work, the number refers to the chapter number in the Pearson Active Learn books, either electronically or on paper if you have bought the books. It should be possible for you to see where we have got to, and to read and work through the next section(s) to keep building your knowledge. Obviously doing the questions from the exercises would be helpful too.

If for some reason, the Pearson explanations do not help, then remember that you also have access to [DrFrostMaths.com](https://www.dr-frost-maths.com), and also that there are lots of videos explaining A Level topics on the internet. Khan Academy is very good for this in particular.

Finally, don’t forget that you are also able to be in touch with the teachers for your class directly by email, and we will obviously help as much as we can to keep you updated and confident!

Thank you.
