

You must

- ✓ Read through the notes on Matrices (green and yellow booklets), the work through the two worksheets.

Each question should be answered, with full working shown, on lined paper. This will be collected in on your first maths lesson of the term and marked. Your teacher will use this as a basis for planning future lessons.

You should

- ✓ Work through the “Further Equations” worksheet.

You will need to remind yourself of the techniques needed to factorise expressions and solve quadratic equations. Being confident at manipulating algebra is vital for success at Further Maths AS.

The solutions for this work will be given to you to self-assess at the beginning of the school year.

You could

- ✓ Work through the “Further Algebra” topic assessment.

This will provide you with further practise at the more challenging styles of algebraic manipulation and proof.

Again, solutions will be given for self-assessment during one of the first lessons of the term.
