

Complete the Table

There are many factors that can affect the performance of an operating system. Three of these are the hardware, malware and virtual memory. For each of these, give an example of how they could reduce OS performance.

Interface	Example
Hardware	
Malware	
Virtual Memory	

Answer the Question

Disk defragmenters are a popular utility program to improve hard disk performance. However, sometimes running this program can take several hours. Identify two things that can affect how quickly the defragmenter can run.

1. _____
2. _____

Answer the Question

Anti-virus is another popular utility program. It helps to improve the security of your system to prevent viruses. Scanning the hard disk can take a very long time sometimes though. Identify two things that can affect how quickly the anti-virus can run.

1. _____
