

# Wider Curriculum

In addition to students being able to study A-Levels and Vocational courses, we offer additional courses as part of our wider curriculum.

For students who enjoy critical thinking and logical thought, we offer AS Thinking Skills in Year 12. This subject is taught in a seminar groups similar to teaching at university and promotes analytical skills.

In addition, we also offer the opportunity for students to carry out an Extended Project Qualification (EPQ) in a topic of their choice beyond their A-Level curriculum where they independently research and compile a project. To support with this, students are given an EPQ mentor and have lessons each week with both their mentor and the EPQ co-ordinator to ensure their project is being completed.

We also offer AS-level Core Mathematics. This qualification is ideal for those who wish to further consolidate and apply their mathematical understanding to real-world contexts,
