

Wednesday 3rd February

L.O. To locate the different rainforests on a map of the world

### **Task 1:**

Move the continents of the world (boxes in yellow) into the correct areas of the map on Slide 2

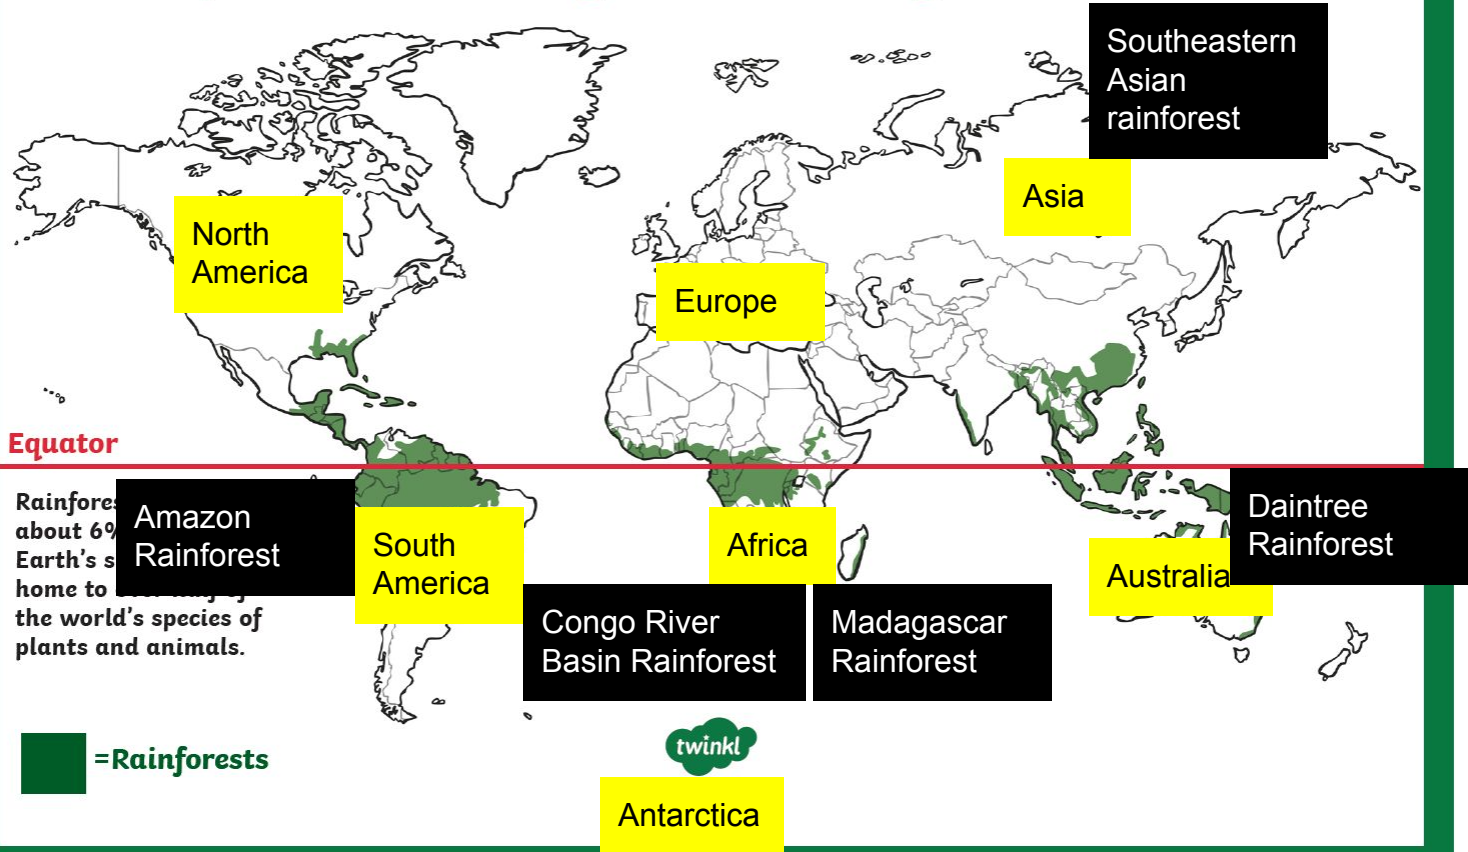

### **Task 2:**

Find and label the different rainforests on your map (boxes in black). You will need to research using Oddizzi or links within the folder.

### **Task 3:**

Choose one of the rainforests and complete a factfile on Slide 3. Remember to include key information!

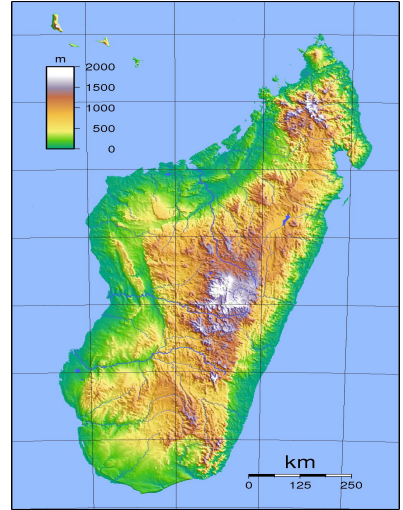

# Tropical Rainforests of the World

# My factfile:

## Madagascar Rainforest:

- Located on a narrow strip on the Eastern Coast of the 4th largest Island in the world, Madagascar.
- Latitude starts from 15 degrees south, down until 25 degrees South.
- It is the one place on Earth that homes Lemurs and many one of a kind animals and plants.
- Madagascar is home to almost 25,000 species of wild animals, with a lot of them being endangered.
- The rainforest covers 43,500 Square miles
- The climate is very warm and humid due to the ocean.
- It has 2,000 mm of rain per year.
- It sits at one of the highest elevations, which means it has the dense undergrowth and shorter plants.

- Type of animals that live here are Lemurs, bats, Rodents and rare-tail newtonian.
- Type of plants that live here are epiphytic orchid, bamboo and palm species.
