

Careers in the curriculum: Duke's subject audit

“All teachers should link curriculum learning with careers” (Gatsby Benchmark 4)

- Statutory Guidance for Careers Education and Guidance, Jan 2018

At Duke's we recognise the importance of incorporating careers learning into curriculum areas. Staff are encouraged to do this through dedicated Careers Weeks, National Apprenticeship Week and through links with local employers. Each department has a dedicated 'Careers Champion' who serves as a link with employers and monitors career related activity within the curriculum area. All staff have access to the Unifrog platform which includes up to date labour market information, a resource library and career profiles demonstrating how the skills developed in their subject areas link to jobs.

Effective Careers in the Curriculum delivery allows teachers to increase engagement and understanding by showing students what they learn in the classroom in the context of real life scenarios. This makes the subject more relatable to the world of work and relevant to everyday. Real-life contexts and examples from the world of work can make subjects easier to understand and help students feel more engaged in their learning. Above all, linking curriculum learning to careers can boost achievement and help students to progress. Students are less likely to drop out if they know about opportunities for further study and how the subject can be combined with others to give access to different pathways (The Gatsby Benchmark Toolkit for Schools, CEC 2019).

Teachers play an important role in influencing student's career choices. Research has shown that students are 18 times more likely to learn if teachers know their hopes and dreams (CEC, 2019).

Gatsby Benchmarks

The following document was given to individual departments so that they could audit their subject area against benchmark 4. In addition to careers in the curriculum staff also noted activities that address the following benchmarks through visits to employers, work experience placements and talks in school from external speakers:

Benchmark 2: Learning from career and labour market information (employer visits/talks)

Record updated with information from subject teachers- December 2020

Benchmark 5: Encounters with employers and employees

Benchmark 6: Experiences of workplaces

Benchmark 7: Encounters with further and higher education
