## MATHEMATICS

## National Curriculum Expectations

## Purpose of Study

Mathematics is a creative and highly interconnected discipline that has been developed over centuries, providing the solution to some of history's most intriguing problems. It is essential to everyday life, critical to science, technology and engineering, and necessary for financial literacy and most forms of employment. A high-quality mathematics education therefore provides a foundation for understanding the world, the ability to reason mathematically, an appreciation of the beauty and power of mathematics, and a sense of enjoyment and curiosity about the subject.

## Aims

The national curriculum for mathematics aims to ensure that all pupils:

- become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately
- reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an argument, justification or proof using mathematical language
- can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions

Mathematics is an interconnected subject in which pupils need to be able to move fluently between representations of mathematical ideas. The programmes of study are, by necessity, organised into apparently distinct domains, but pupils should make rich connections across mathematical ideas to develop fluency, mathematical reasoning and competence in solving increasingly sophisticated problems. They should also apply their mathematical knowledge to science and other subjects.

The expectation is that the majority of pupils will move through the programmes of study at broadly the same pace. However, decisions about when to progress should always be based on the security of pupils' understanding and their readiness to progress to the next stage. Pupils who grasp concepts rapidly should be challenged through being offered rich and sophisticated problems before any acceleration through new content. Those who are not sufficiently fluent with earlier material should consolidate their understanding, including through additional practice, before moving on.

## Progression in Mathematics at St Michael's CE Primary School

## Statutory and Non-Statutory Frameworks:

EYFS

## Statutory Framework for the early years foundation stage

Developing a strong grounding in number is essential so that all children develop the necessary building blocks to excel mathematically. Children should be able to count confidently, develop a deep understanding of the numbers to 10 , the relationships between them and the patterns within those numbers. By providing frequent and varied opportunities to build and apply this understanding - such as using manipulatives, including small pebbles and tens frames for organising counting - children will develop a secure base of knowledge and vocabulary from which mastery of mathematics is built. In addition, it is important that the curriculum includes rich opportunities for children to develop their spatial reasoning skills across all areas of mathematics including shape, space and measures. It is important that children develop positive attitudes and interests in mathematics, look for patterns and relationships, spot connections, 'have a go', talk to adults and peers about what they notice and not be afraid to make mistakes.

## ELG: Number

Children at the expected level of development will:

- Have a deep understanding of number to 10, including the composition of each number; 14
- Subitise (recognise quantities without counting) up to 5;
- Automatically recall (without reference to rhymes, counting or other aids) number bonds up to 5 (including subtraction facts) and some number bonds to 10 , including double facts.

## ELG: Numerical Patterns

Children at the expected level of development will

- Verbally count beyond 20 , recognising the pattern of the counting system;
- Compare quantities up to 10 in different contexts, recognising when one quantity is greater than, less than or the same as the other quantity;
- Explore and represent patterns within numbers up to 10 , including evens and odds, double facts and how quantities can be distributed equally.

## Mathematics at St

Michael's CE Primary School
Our maths provision aims to create a culture of high achievement in maths which leads to confident children who show resilience as they master the key concepts of fluency of calculation, logical reasoning and problem solving.
Children develop respect for the discipline through pattern spotting, proving and disproving ideas, classifying and comparing.

## Links with other subjects

History: Chronological ordering of dates and timelines, Roman Numerals.
Geography: Map work with links to position and direction including grid references, knowledge of time zones, data handling and analysis of statistics, measures including temperature, straight line distances and economic activity links to money Science: Gathering and recording scientific results Art: Pattern spotting, use of perpendicular and parallel lines.
Design Technology: Links to measures including measuring materials accurately and to money with costing products.
Languages: Counting, reading and writing numbers in a different language. Music: identifying repeated patterns

## Big Ideas

Fluency: the ability to perform mathematical operations and processes accurately and quickly. Mathematical fluency has 4 parts: accuracy, automaticity, speed, flexibility.

## Reasoning: The ability to logically justify and

 identify key information in problems. To select the most appropriate process to arrive at a solution.Problem Solving: to able to think systematically in order to make appropriate decisions to apply known skills in a variety of contexts.

## 'Pure mathematics is, in its way, the poetry of logical ideas.

Albert Einstein (German Physicist)

## Pedagogy Progress

- Focus on arithmetical fluency using a 'concrete, pictorial, abstract' approach.
- Low stakes quizzing for long term memory
- Varied teaching and learning activities
- Thoughtful sequencing of content
- Specific teaching of vocabulary
- Higher order thinking tasks - linked specifically to reasoning and problemsolving
- Units of work are carefully sequenced so prior knowledge and concepts are built upon
- Regular formative assessment and assessment for learning ensures gaps are filled
- Effective questioning and higher order thinking features in every level
- Progress and attainment within units is recorded and shared with all teaching staff
- Opportunity for revisiting content and consolidating or applying learning at greater depth

## Support

For staff:

- National Curriculum
- Subject associations - - NECTM
- White Rose Maths
- Mathematical Association

For Pupils:

- TTRockstars
- Numbots

Progression in Mathematics

| Algebra |  |  |  |  |  |  |  | Pupils should be taught to: use simple formulae generate and describe linear number sequences express missing number problems algebraically find pairs of numbers that satisfy an equation with 2 unknowns enumerate possibilities of combinations of 2 variables. |

Promoting SMSC and British Values in Mathematics

| Spiritual | Moral | Social | Cultural |
| :--- | :--- | :--- | :--- |
| Developing deep thinking and <br> questioning through maths <br> about the way in which the <br> world works promotes spiritual <br> growth. | Within the classroom, we <br> encourage respect and reward <br> good behaviour. | - In classrooms, we look for <br> opportunities for pupils to use <br> miniwhiteboards to promote <br> self-esteem and build self- <br> confidence. | We incorporate mathematics <br> into cross-curricular topics. |

## Progression in Mathematics <br> at St Michael's CE Primary School

- We aim to give all students an appreciation of the richness and power of maths.
- Maths in Nature is embedded in Sequences, Patterns and Symmetry
- We promote a sense of wonder in the exactness of mathematics in the exploration of shapes, number patterns and real world examples.
- We value listening to others' views and opinions on problem solving.
- We promote discussion about mathematical understanding and challenge assumptions, supporting students to question information and data that they are presented with.
- We recognise how logical reasoning can be used to make decisions and choices that help them to learn in mathematics.
- We encourage collaborative learning in the classroom - in the form of listening and learning from each other and paired discussion / working partners in order to show that the result is often better than they could achieve alone.
- We help pupils develop their mathematical voice and powers of logic, reasoning and explanation by offering explanations to each other.
- We exhibit pupils work in classrooms on working walls and displays to share their good practice and celebrate achievement.

|  | The Rule of Law | Individual Liberty | Respect ${ }^{\text {a }}$ | Tolerance of those with different faiths |
| :---: | :---: | :---: | :---: | :---: |
| - Ethical issues e.g. business and economics. <br> - How data can be manipulated through its presentation to convey different messages | - Through maths we can encourage an understanding of rules and patterns. Maths is driven by rules; children are encouraged to have | Opportunities to discuss different ways and approaches to problem solving <br> - To become lifelong learners and develop | - Respect or the way other people are working <br> - Encouragement of collaborative learning in all subjects | - Acceptance of positive criticism <br> - Allowing mistakes and building on these |
