

Resilient Individuals

We stimulate decision-making and problem-solving by scaffolding the process of conducting scientific experiments.

Global Identity

We aspire to foster a love of, and enthusiasm for, all aspects of Science within the children, building on their natural awe and wonder of the world. We seek to link Science to the children's everyday life and to give them experiences to explore their gifts and talents to enable them to grow and become future scientists and engineers.

At Sacred Heart, we want every child to aspire to succeed as a scientist and be the best that they can be.

Our curriculum drivers are embedded in science, as these are the skills we have identified that the children need in order to be successful.

Confident communicators

We strive to develop children's confidence in speaking by providing them with opportunities to question their own knowledge and the knowledge of others by relating Science to their daily lives.

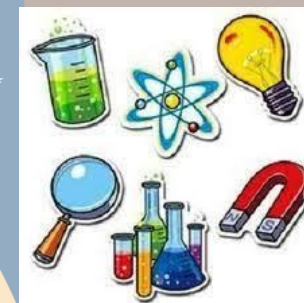

Knowledge rich

We endeavour to link what we teach to the real world and expand the children's scientific vocabulary. Dual-objective lessons allow children to understand the content objective which then links to the scientific skill objective.

Science

Curious Questioners

We encourage the children to question what they think they know about the world and to never be afraid to do so.

Following Jesus in all we do, think and say
