Mathematics

Task One: This week please take your child on a number hunt. This can be in the outdoor area/local environment or even around the house.

Task Two/Challenge: Record a number line showing the correct number formation. Please encourage your child to record as many numbers as they can think of, placing the numbers in the correct order and writing them the correct way round. Once they have written their numbers, encourage them to find the same number of objects to match the numeral. (Pasta, sweets, fruit, household items, conkers and leaves are useful for this task).

Please share your experience with school on Tapestry by uploading a photo of your adventure together.
