

St Patrick's Vision for Computing

'To equip our children with the skills to become digitally literate in an ever growing digital age, to prepare them for today's world and the future.'

The children at St Patrick's RC Primary School are encouraged to become resilient, creative, inventive and resourceful learners, who work independently and share, develop and evaluate ideas. They learn to communicate effectively using a variety of programs to create, edit, and publish their work. Children are provided with opportunities to solve problems and explore and experience new areas of Computing and new technologies such as Coding, Robotics, Virtual and Augmented Reality, Animation and STEM (Science Technology Engineering Mathematics) projects. Children are provided with a broad and balanced online safety education to ensure that they can navigate the online world safely and positively. They will leave St Patrick's equipped with computing skills, which they can transfer to the workplace, and which will prepare them for today's world and the future.
